SOCIOLOGY OF WORK

Course Objective:

The course introduces the idea that though work and production have been integral to societies through time, the origin and spread of industrialization made a distinct rupture to that link. This rupture can also be seen mirrored in the coming of sociology as a discipline that considered work as central to the study of society. Based on this premise the paper goes on to provide an outline as to how values and ideals of pluralized industrialism(s) have caused an absorbed multiple transformative shifts to the local and global social networks of the contemporary world.
